## GLASS CLAMPS <br> Adjustable Wall Mount Clamp Сat No. ADJ037

Note: The ADJ037 Adjustable Wall-to-Glass Clamp is designed for use in fastening a fixed panel of glass that runs into a wall at an angle other than 90 degrees. It is important to note the clamp can be mounted to the wall on either the long-point side or short-point side of the miter, on angles up to 25 degrees from 90 degrees (not lower than 65 degrees or over 115 degrees - see Example 1 below). For angles more than 25 degrees from 90 degrees (lower than 65 degrees or over 115 degrees), the wall-mounted portion must be fastened on the side of the glass that has the short-point of the miter (see Example 2 below).

## Identifying Your Angle and Miter:

In order to use the ADJ037, the angle the glass runs into the wall must be properly identified. Please use the following as a guideline to correctly identify the angle and miter required:

When a fixed panel of glass runs into a wall squarely at 90 degrees, the angle/miter is considered " 0 ". " 0 " means "no miter" on the glass, just a polished edge. If a glass panel runs into a wall at an angle, a miter should be put on the glass to correspond with the number of degrees from 90 (or " 0 " miter) the glass is to be mitered. In Example 1 above, the glass is running into the wall at $105^{\circ} / 75^{\circ}$. Each of these numbers is $15^{\circ}$ from $90^{\circ}$. As shown in Example 1 above, a $15^{\circ}$ miter is put on the glass. To get the correct hole location in the glass, use the chart to the right.

## Hole Drilling Information

The table to the right addresses the dimension required from the long-point of the miter to the centerline of a $7 / 8^{\prime \prime}(22 \mathrm{~mm})$ hole in the glass. No U-notches are required for the ADJ037. All dimensions shown already allow for a $1 / 16^{\prime \prime}$ ( 1.5 mm ) clearance between the glass and the wall.
